Pneumatic handling  
Пневмотранспорт

# ROOTSOVA DMYCHADLA

Dmychadlová soustrojí jsou určena pro bezolejovou dopravu a stlačování vzduchu.

Provedení: Soustrojí jsou kompletována se základním příslušenstvím, potřebným pro bezporuchový provoz. Dmychadlo je poháněno elektromotorem pomocí převodu klínovými řemeny.

### Základní vybavení

1. Dmychadlo s třízubými rotory
2. Elektromotor
3. Nosný rám s tlumičem stlačeného vzduchu
4. Tlumič sání s hrubou filtrací
5. Řemenový převod
6. Kryt řemenového převodu, pokud není soustrojí kompletováno s protihlukovým krytem
7. Pojistný ventil Herose
8. Zpětná klapka na výtlaku
9. Tlaková hadice na výstupu
10. 1x kompletní technická dokumentace

### Zvláštní příslušenství

1. Kompenzátor s přírubou na výstupu
2. Protihlukový kryt
3. Manometr na výtlaku
4. Filtr SOLBERG pro jemnou filtraci
5. Elektrická řídící jednotka v samostatné skříni
6. Frekvenční měniče

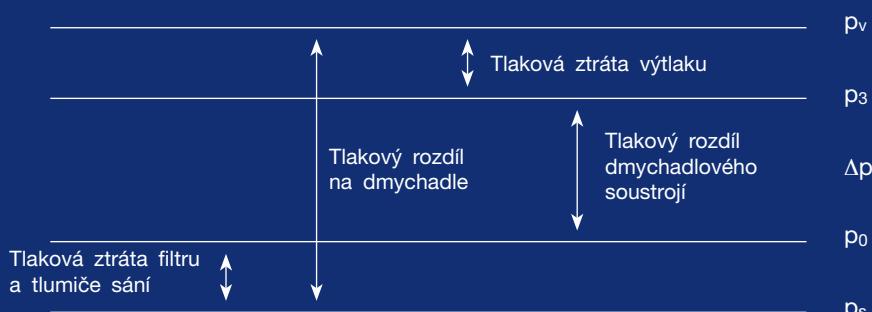

### Inženýrské služby

1. Software na určení optimálního typu a výkonnosti dmychadla, příkonu, teploty vzdušiny na výtlaku z dmychadla, optimalizace elektromotoru,...
2. Poradenská činnost v oblasti rozvodů stlačeného vzduchu
3. Výpočty nucené ventilace strojovny

### Klimatické podmínky

Klimatické provedení výrobku: WT ČSN EN 60721-3-3  
 Kategorie umístění výrobku: ČSN EN 60721-3-3  
 3K7L, 3B1, 3C3, 3S2, 3M3

### TLAKOVÉ POMĚRY STANDARDNÍHO SOUSTROJÍ

$p_s$  – tlak na sací přírubě dmychadla, je nižší než tlak atmosférický o tlakovou ztrátu na filtrační vložce a v tlumiči sání

$p_0$  – tlak atmosférický

$p_3$  – tlak na výtlacné přírubě z dmychadlového soustrojí, je nižší než tlak na výtlacné přírubě dmychadla o tlakovou trátu v tlumiči výtlaku a tlakovou ztrátu na zpětné klapce, T-kusu pojistného ventilu a kompenzátoru

$p_v$  – tlak na výtlacné přírubě dmychadla

Katalog je aktualizován 1x ročně. Vzhledem k vývoji a zlepšování užitných vlastností výrobků LUTOS může v průběhu této doby dojít k drobným změnám údajů uvedených v katalogu. Doporučujeme proto konkrétní údaje ověřit v aktualizovaném katalogu ve formátu PDF na stránkách [www.lutos.cz](http://www.lutos.cz).

Usage: For oilfree transport and pressure of air and neutral gasses.

Model: Blower packages are assembled with basic equipment necessary for trouble-free operation. Blowers are driven by electromotor with V-belts.

### Basic equipment

1. Blower is with 3 lobe rotors
2. El-motor
3. Supporting frame with discharge silencer
4. Suction silencer with coarse filtration
5. Belt drive
6. Cover of belt drive, if the blower packages is not completed with sound enclosure
7. Safety valve Herose
8. Non-return flap valve on discharge
9. Pressure hose on outlet
10. Complete technical documentation of blower packages

### Accessories

1. Compensator on outlet
2. Sound enclosure
3. Pressure gauge on discharge
4. Filter SOLBERG for fine filtration
5. Electro control system in the separate box
6. Frequency convertor

### Engineering Service

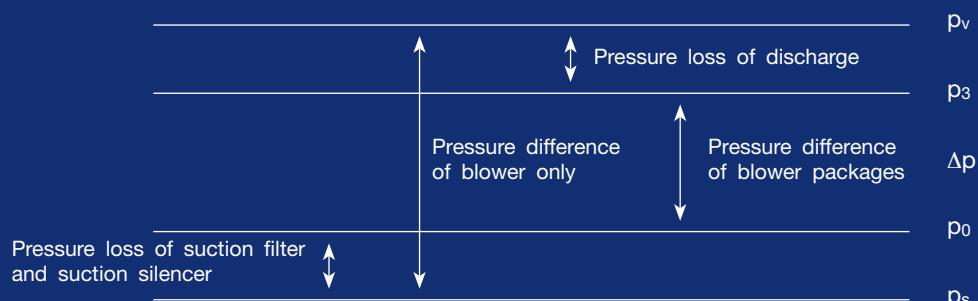

1. Software for determination of the optimal model and power of the blower, blower input power, temperature of the compressed air and optimum of electric motor, etc.
2. Consultation service in the branch of air distribution.
3. Calculation of the forced ventilation of the blower house

### Air conditions

Air implementation of product: WT ČSN EN 60721-3-3

Placement category of product: ČSN EN 60721-3-3  
3K7L, 3B1, 3C3, 3S2, 3M3

### PRESSURE RATE OF BASIC BLOWER PACKAGES

$p_s$  – suction pressure of the blower suction flange is lower about pressure loss of suction filter and suction silencer than atmospheric pressure

$p_0$  – atmospheric pressure

$p_3$  – pressure of the discharge flange of the blower packages is lower about loss in the discharge silencer and about loss of non-return flap valve, T-piece, safety valve and compensator than pressure of the discharge flange of the blower only

$p_v$  – pressure of the discharge flange of the blower only

Our catalogue is updated once a year. In the view of development and improvement of utility qualities of Lutos' products, it is possible that some information can be slightly changed within a year. So we recommend you to verify particular data in our updated catalogue in PDF format on our web pages [www.lutos.cz](http://www.lutos.cz).

Использование: Для безмасляной транспортировки и сжатия воздуха и нейтральных газов.

Исполнение: Агрегаты укомплектованы всеми необходимыми компонентами, необходимыми для безаварийной эксплуатации. Нагнетатель приводится в движение электродвигателем, при помощи ременной клиновидной передачи.

### Основное оборудование

1. Нагнетатель с трёхзубыми роторами
2. Электродвигатель
3. Несущая рама с демпфером сжатого воздуха
4. Демпфер с грубым фильтрованием
5. Ременная передача
6. Крышка ременной передачи, если агрегат не укомплектован противошумным кожухом
7. Предохранительный клапан «Herose»
8. Обратный клапан на стороне нагнетания
9. Напорный шланг
10. 1 комплект технической документации

### Специальные принадлежности

1. Компенсатор
2. Противошумный кожух
3. Манометр на стороне нагнетания
4. Фильтр SOLBERG прокладка для тонкой фильтрации.
5. Шкаф управления (в отдельном корпусе).
6. Преобразователь частоты.

### Инженерные службы

1. Программное обеспечение для определения оптимального типа и производительности нагнетателя, потребляемой мощности, температуры среды на стороне нагнетания, оптимизации электродвигателя, и пр.
2. Консультационная деятельность в области обработки сжатого воздуха.
3. Расчёты принудительной вентиляции машинного зала.

### Климатическое исполнение

Климатическое исполнение изделия: WT ČSN EN 60721-3-3

Категория размещения изделия: ČSN EN 60721-3-3

7L, 3B1, 3C3, 3S2, 3M3

### СООТНОШЕНИЯ ДАВЛЕНИЙ СТАНДАРТНОГО АГРЕГАТА

$p_s$  – давление на всасывающем фланце нагнетателя, меньше атмосферного давления на величину потери давления на фильтровальном вкладыше и в демпфере всасывания

$p_0$  – атмосферное давление

$p_3$  – давление на фланце напорного выхода нагнетательного агрегата, ниже давления на фланце напорного выхода нагнетателя на величину потери давления в демпфере нагнетания и величину потери давления на обратном клапане, на Т – образном звене предохранительного клапана и на компенсаторе

$p_v$  – давление на фланце напорного выхода нагнетателя

Каталог оборудования обновляется один раз в год. Учитывая развитие и улучшение потребительских свойств изделий ЛУТОС, со временем могут возникнуть некоторые небольшие отклонения от данных, приведенных в каталоге.

В связи с этим рекомендуется проверить конкретные параметры оборудования в постоянно обновляющемся каталоге в формате PDF на сайте [www.lutos.cz](http://www.lutos.cz)
