

# Adsorption Dryer Classic

## HEATLESS ADSORPTION DRYER

Gardner Denver Classic Dryers are designed to provide high drying efficiency for large volume flows. The Gardner Denver Classic has everything our customers need to produce clean dry compressed air: a control system, a pre-filter, a dryer, an after-filter, an automatic zero-loss condensate drain, and a silencer – all ready to be installed.

The Gardner Denver Classics are designed for volume flows of 0.08 to 145.83 m<sup>3</sup>/min and achieve pressure dew points of either -20°, -40°C or -70°C depending on the desiccant. The Gardner Denver Classics are equipped with an electronic control system that is characterized by its high cost-effectiveness and low operating costs. The electronic control system allows for fixed or variable cycles with an automatic shut-off. Regeneration can be tailored to meet process requirements.
